

environmental policy statement.

S&D Coffee, Inc. understands that the world's environmental issues are ever-increasing and is committed to elevating our environmental stewardship and sustainability. We recognize that as a leader in our community and industry we are in a unique position to encourage environmentally responsible behavior. S&D intends to make the most of our position and ensure our products and activities are environmentally responsible. S&D complies with — and strives to exceed — applicable environmental laws and regulations.

Waste Management

Reduce generating excess waste by improving operating efficiencies. Strive to ensure no waste material that could be recycled or reused is sent to landfill. Investigate new opportunities to ensure our waste streams have end-of-life usage.

Water and Energy Conservation

Improve water and energy efficiencies in existing operations. Invest in systems and technology that provide superior water and energy efficiency in new operations. Consider water and energy conservation as a part of project planning and review. Minimize impact on water quality through management of site stormwater.

Greenhouse Gas Emissions Management

Manage GHG emissions by understanding sources and solutions. Examine the supply chain to understand impact and reduce emissions.

S&D supports these areas of focus by maintaining and continually improving its Environmental Management System, setting goals for environmental performance, and regularly reviewing them. We communicate our environmental policy to all employees, and those who work on behalf or come into contact with S&D in the hopes that we may inspire others to share our commitment to environmental awareness and preservation.
